

1-pole Solid State Contactors with Current Sensing

Description

This slim RG design is capable of detecting various failure modes occurring to the heaters and also to the product itself. Failures which can be detected include partial load failure, heater loss, open circuit SSR, short circuit SSR and SSR over temperature. A normally closed, potential free alarm, opens in the event of a system or power semiconductor fault.

A load current setpoint has to be TEACHed to the SSR either locally by the TEACH button on the front of the device or remotely through the provided terminal.

This product is available either with integrated heatsink (RGC1S series) and also without heatsink (RGS1S series). The minimum product width is 22.5 mm. The control and auxiliary terminals are double box clamps to facilitate safe looping whilst the power terminals are either screw terminals or box clamps depending on the model selected.

Specifications are at a surrounding temperature of 25°C unless otherwise specified.

Benefits

- **Panel space savings.** The slimmest product footprint is only 22.5 mm up to 30 AAC.
- **Less maintenance costs.** Wire bonding technology reduces thermal and mechanical stresses of the output chips resulting in a larger number of operational cycles compared to other assembly technologies.
- **Low machine downtime.** Integrated overvoltage protection prevents the solid state relay from breaking down due to uncontrolled transients that may occur on the lines.
- **Ease of use.** The RGC ready-to-use solution is provided with integrated heatsink thus eliminating the need for the user to calculate the size of heatsink needed for adequate thermal dissipation.
- **Cost effective protection co-ordination.** The high I^2t specification permits easy Type 2 protection co-ordination with B-type Miniature Circuit Breakers.
- **Fast wiring.** Power connections for models rated >30 A are equipped with terminals that can handle cables up to 25 mm² / AWG3 cables.
- **Accommodates UL508A requirements for Industrial Control Panels.** The RGC is certified as a listed product. All models carry a 100 kArms Short Circuit Current Rating.
- **Protection against SSR overheat.** Integrated over temperature protection protects the RGC output from getting damaged in case of overheating.

Applications

Injection moulding, PET blow moulding, Blow moulding, Blow film extrusion, Thermoforming, Food packaging machines, Wrapping and sealing machines.

Main features

- Partial load failure detection
- Zero cross switching with ratings up to 660 VACrms & 85 AACrms @ 40°C
- Local or remote current setpoint
- Alarm signal output for SSR or load circuit malfunction

Voltage interruptions	EN/IEC 61000-4-11 0% for 5000 ms (PC2)

Electromagnetic compatibility (EMC) - Emissions	
Radio interference field emission (radiated)	EN/IEC 55011 Class A: from 30 to 1000 MHz
Radio interference voltage emissions (conducted)	EN/IEC 55011 Class A: from 0.15 to 30 MHz (External filter may be required - refer to Filtering section)

Note:

- Control input lines must be installed together to maintain products' susceptibility to Radio Frequency interference.
- Use of AC solid state relays may, according to the application and the load current, cause conducted radio interferences. Use of mains filters may be necessary for cases where the user must meet E.M.C requirements. The capacitor values given inside the filtering specification tables should be taken only as indications, the filter attenuation will depend on the final application.
- Performance Criteria 1 (PC1): No degradation of performance or loss of function is allowed when the product is operated as intended.
- Performance Criteria 2 (PC2): During the test, degradation of performance or partial loss of function is allowed. However when the test is complete the product should return operating as intended by itself.
- Performance Criteria 3 (PC3): Temporary loss of function is allowed, provided the function can be restored by manual operation of the controls.

O:此零件所有材料中含有的该有害物低于GB/T 26572的限定。						
X: 此零件某种材料中含有的该有害物高于GB/T 26572的限定。						

Mode of operation

Introduction:

The RGC1S must have a stored current setpoint to operate as a Solid State Relay with a Sensing function. The current setpoint is the nominal operating current that is expected through the SSR when all heater loads are functioning properly. The SSR is shipped without having a stored setpoint. This current setpoint is to be stored upon a TEACH procedure as explained below. The wrong setpoint is stored if the heater loads are faulty or the mains supply voltage is not close to operating voltage during the TEACH procedure.

Caution: In case of a brand new RGC1S (i.e. an RGC1S that does not have a stored current set point), a TEACH procedure on no load (i.e. no load connected to the RGC1S load terminal 2/T1) will result in a stored current set point of 0A.

Upon application of supply voltage, the yellow and red LED will flash continuously in sequence (i.e., scroll) indicating that the device has no current setpoint stored. The green LED is ON at half intensity indicating the presence of supply voltage. As soon as control voltage is applied the green LED will be ON at full intensity. The alarm output, which is normally closed, is open to indicate that the SSR has no stored setpoint.

If mains supply is present upon application of control voltage the SSR will switch ON despite having no stored current setpoint. However, even though the SSR switches ON, the Sensing features associated with the RGC1S are disabled as shown in the above operations diagram. The Sensing features will be enabled ONLY once the TEACH procedure explained below is completed. For SSR to switch ON upon application of control voltage, supply voltage has to be present across terminals A1, A2.

Mode of operation (cont.)

The TEACH procedure

The TEACH procedure can be performed either locally or remotely. For local TEACH, the front 'TEACH' button on the SSR has to be pressed for at least 3 seconds (but less than 5 seconds). Remote TEACH can be performed by applying a high signal on terminal IN 1 for a duration of at least 3 seconds (but less than 5 seconds).

If the TEACH button is pressed for more than 5 seconds or the remote TEACH signal is longer than 5 seconds, the TEACH procedure is not performed.

Supply voltage has to be present across terminals A1, A2 for the TEACH function to be performed and SSR to operate

TEACH in the absence of a control signal

It is possible to TEACH the SSR without the presence of a control signal. In case of no previous stored setpoint (factory default), red and yellow LED will flash accordingly indicating this. The TEACH function will start as soon as the push button is released. The SSR will switch fully ON for 5 seconds (yellow LED ON during these 5 seconds) at the end of which, a load current setpoint is recorded. If TEACH procedure is successful the yellow and red LED will blink together for three times to indicate a successful setpoint measurement. The alarm output across terminals 11, 12 closes indicating a normal situation.

In case of an unsuccessful TEACH, the red & yellow LED will scroll continuously indicating that no current setpoint is stored. If load current does not stabilise during the 5 seconds TEACH sequence, it will not be possible to store setpoint. Another attempt to do a TEACH may be done until setpoint is recorded.

TEACH when control signal is present

In this case the TEACH procedure is identical to the TEACH procedure when there is no control signal. During the 5 seconds TEACH the status of the load switching will not be distinguished from unTEACHed state since load was ON before TEACH. Load remains ON as long as control voltage is present.

If SSR is in a LOCKed position (see below) it will not be possible to perform a new TEACH. SSR has to be unLOCKed first.

Mode of operation (cont.)

Fault Conditions									
Line Voltage; 1L1									
Load Voltage; 2T1									
Load Current									
Control Voltage; IN 2									
Supply Voltage; A1, A2									
Green LED									
SSR Overtemperature									
Alarm Output (NC); 11, 12									
Yellow LED									
Red LED									
 half intensity  full intensity  Condition: Partial load failure  Condition: overtemperature  Condition: Short cct. across L1 - T1  Condition: Open cct. across L1-T1 or Load loss  Condition: Phase/ Line loss									

Partial Load Failure

This occurs when the load current decreases by more than 16.67% as compared to the stored setpoint. During this failure mode the SSR remains ON but alarm output opens to indicate an alarm condition. The red LED is continuously ON during this condition. If current rises back to normal levels the alarm indications switch to the normal state.

Over Temperature

If the SSR derating curve is exceeded during normal operation, an over-temperature condition is detected and the SSR output switches OFF. A visual alarm is indicated by the red blinking LED (3 flashes - see details in ALARM LED INDICATIONS) and alarm signal opens. The alarm resets automatically when the overtemperature condition is no longer present.

SSR Short Circuit

This condition is detected in the absence of a control signal and load current (in the region of 800mA and over) still flowing through the SSR. A visual indication is given by the red blinking LED (4 flashes - see details in ALARM LED INDICATIONS) and open alarm across terminals 11, 12. The yellow LED stays ON even though the green LED is at halfintensity (i.e. absence of control input voltage) to indicate status of load.

SSR Open Circuit / Heater Loss / Line Loss

SSR output remains OFF even after application of the control voltage on terminal IN 2. A visual indication is given by the red blinking LED (2 flashes - see details in ALARM LED INDICATIONS) and open alarm across terminals 11, 12.

Alarm auto reset

In all alarm conditions described above, the alarm LED and signal output from terminals 11, 12 reset automatically to the normal condition as soon as the alarm condition is no longer present. There is no need for an alarm reset.

Other functions: TEACH LOCK/UNLOCK

The device can be locked to prevent undesirable local TEACH. This can be done by sending a pulse with a duration between 1s and 1.5s to the remote TEACH terminal IN 1. To TEACH a LOCKed unit, a pulse with duration between 1s and 1.5s has to be applied first to terminal IN 1, before performing the TEACH. The initial condition of the unit after every power up (through A1, A2 terminals) is UNLOCKed.

LED indicators

CONTROL	Green 	Half intensity Full intensity OFF	Supply ON, Control OFF Supply ON, Control ON Supply OFF, Control OFF
LOAD	Yellow 	ON OFF	Load ON Load OFF
FAULT	Red 	ON	Fully ON or flashing when alarm condition is present. Refer to Alarm management section
		OFF	No alarm condition

Alarm management

Alarm condition present	- The state of the Red LED of the RGC1S is ON with a specific flashing rate - Alarm output operates	
Alarm types	No. of flashes	Description of fault
	100% ON	Partial Load Failure
	50% ON	No TEACH setpoint
	1	Locked TEACH
	2	Open SSR / Heater
	3	SSR Overtemperature
	4	SSR Short Circuit
Flashing rate	 The diagram illustrates the flashing rate of the Red LED. It shows a series of pulses where the width of each pulse is 0.5s and the time interval between the start of consecutive pulses is 3s.	

Short circuit protection

Protection Co-ordination, Type 1 vs Type 2:

Type 1 protection implies that after a short circuit, the device under test will no longer be in a functioning state. In type 2 co-ordination the device under test will still be functional after the short circuit. In both cases, however the short circuit has to be interrupted. The fuse between the enclosure and supply shall not open. The door or cover of the enclosure shall not be blown open. There shall be no damage to conductors or terminals and the conductors shall not separate from the terminals. There shall be no breakage or cracking of insulating bases to the extent that the integrity of the mounting of live parts is impaired. Discharge of parts or any risk of fire shall not occur.

The product variants listed in the table hereunder are suitable for use on a circuit capable of delivering not more than 100,000A Symmetrical Amperes, 600Volts maximum when protected by fuses. Tests at 100,000Arms were performed with Class J fuses, fast acting; please refer to the tables below for maximum ratings. Tests with Class J fuses are representative of Class CC fuses.

Protection co-ordination Type 1 according to UL 508

8. Between MCB and Load (including return path which goes back to the mains)

Note: A prospective current of 6 kA and a 230 / 400 V power supply is assumed for the above suggested specifications. For cables with different cross section than those mentioned above please consult Carlo Gavazzi's Technical Support Group.

S201 models refer to 1-pole M.C.B., S202 models refer to 2-poles M.C.B.

Dimensions

RGC1S60D25GKEP

RGC1S60D26GGEP

RGC1S60D30GKEP , RGC1S60D31GKEP

RGC1S60D41GGEP

RGC1S60D61GGEP

Housing width tolerance +0.5mm, -0mm as per DIN 43880. All other tolerances +/- 0.5mm.
Dimensions in mm.

Dimensions (cont.)

RGC1S60D90GGEP (fan to be supplied externally - no terminations provided on the RG module)

RGC1S60D41GGUP

RGC1S60D61GGUP

Housing width tolerance +0.5mm, -0mm as per DIN 43880. All other tolerances +/- 0.5mm.
Dimensions in mm.

- 1 L1 : Line connection
- 2 T1 : Load connection
- 11+ : Alarm supply
- 12- : Alarm output
- A1+ : Supply voltage
- A2- : Ground connection
- IN 1 : Remote TEACH signal
- IN 2 : Control voltage

Note:

- Local TEACH by pressing front button for more than 3 seconds but less than 5 seconds
- Fan supply (24 VDC) for RGC1A60D90GGEP has to be supplied directly to fan

Connection interface

Uc: 4 - 32 VDC
Us: 24 VDC
Ua: max. 35 VDC
Alarm Output: max. 50 mA

Mounting instructions

Mounting on DIN rail

Dismounting from DIN rail

Connection Specifications

Power connections			
Terminals	1/L1, 2/T1		
Conductors	Use 75°C copper (Cu) conductors		
	RGC1S..25GKEP RGC1S..30GKEP RGC1S..31GKEP	RGC1S..26GGEP	RGC1S..41GG.P RGC1S..61GG.P RGC1S..90GGEP
			
Connection type	M4 screw with captivated washer		M5 screw with box clamp
Stripping length	12 mm		11 mm
Rigid (solid & stranded) UL/cUL rated data	2x 2.5 – 6.0 mm ² 2x 14 – 10 AWG	1x 2.5 – 6.0 mm ² 1x 14 – 10 AWG	1x 2.5 – 25.0 mm ² 1x 14 – 3 AWG
Flexible with end sleeve	2x 1.0 – 2.5 mm ² 2x 2.5 – 4.0 mm ² 2x 18 – 14 AWG 2x 14 – 12 AWG	1x 1.0 – 4.0 mm ² 1x 18 – 12 AWG	1x 2.5 – 16.0 mm ² 1x 14 – 6 AWG
Flexible without end sleeve	2x 1.0 – 2.5 mm ² 2x 2.5 – 6.0 mm ² 2x 18 – 14 AWG 2x 14 – 10 AWG	1x 1.0 – 6.0 mm ² 1x 18 – 10 AWG	1x 4.0 – 25.0 mm ² 1x 12 – 3 AWG
Torque specifications	Pozidriv 2 UL: 2.0 Nm (17.7 lb - in) IEC: 1.5 – 2.0 Nm (13.3 – 17.7 lb - in)		Pozidriv 2 UL: 2.5 Nm (22 lb - in) IEC: 2.5 – 3.0 Nm (22 – 26.6 lb - in)
Aperture for termination lug (fork or ring)	12.3 mm		n/a
Protective Earth (PE) connection	M5, 1.5 Nm (13.3 lb-in) M5 PE screw is not provided with the solid state relay. PE connection is required when product is intended to be used in Class 1 applications according to EN/IEC 61140		

Control connections		
Terminals	A1(+), A2(-), IN1, IN2, 11 (+), 12(-)	
Conductors	Use 60/75°C copper (Cu) conductors	
		
Connection type	M3 screw with box clamp	
Stripping length	6 mm	
Rigid (solid & stranded) UL/cUL rated data	2 x 1.0 – 2.5 mm ² 2 x 18 – 14 AWG	1 x 1.0 – 2.5 mm ² 1 x 18 – 14 AWG
Flexible with end sleeve	2 x 1.0 – 2.5 mm ² 2 x 18 – 14 AWG	1 x 1.0 – 2.5 mm ² 1 x 18 – 14AWG
Torque specification	Pozidriv 1 UL: 0.5 Nm (4.4 lb - in) IEC: 0.4 - 0.5 Nm (3.5 - 4.4 lb - in)
